

## **Greenergy aligns 100% of its revenue with the European taxonomy for sustainable activities**

- Contributes to the European Union's environmental objectives, particularly climate change
  - Greenergy has avoided the emission of 325,408 million tons of CO2 in 2023
- Greenergy's Sustainability strategy includes detailed plans for climate change mitigation and adaptation

Madrid, May 28, 2024.- Greenergy has aligned 100% of its revenue and 99% of its investment in 2023 with the European taxonomy for sustainable activities, as detailed in the company's latest Sustainability Report.

This regulation aims to create a common framework to achieve transparency in managing, communicating, and identifying activities that significantly contribute to the European Union's environmental objectives. For Greenergy, this specifically applies to climate change mitigation.

Greenergy has demonstrated that is aligned with and eligible under the taxonomy. The company has avoided over 325,400 tons of CO2 emissions in 2023 through various renewable energy projects, equivalent to the energy consumption of more than 333,200 households. In total, Greenergy has prevented the emission of 751,837 tons of CO2 between 2021 and 2023.

Aligned with this goal, the company's ESG strategy for 2024-2026 includes a detailed climate change mitigation plan which includes a range of actions and initiatives outlined in the recently approved Net Zero strategy. This plan also includes the development of a specific climate action policy and the implementation of a climate change adaptation plan within its business strategy.

Greenergy's sustainability policy underscores the company's firm commitment to preserving the environment in the regions where it operates, developing initiatives that neutralize, minimize, and compensate for the environmental impact on the ecosystem resulting from renewable projects.

"In recent years, we have worked diligently to integrate sustainability into our investments, methodologies, and business decisions. This effort has earned us a leading position in ESG, enabling us to continue generating a positive impact on the environment and local communities. This commitment is reflected in our full compliance with the European taxonomy in terms of revenue and 99% in terms of CAPEX," has explained Rocío Fernández, Greenergy's sustainability director.

### About Greenergy Renovables:

Greenergy Renovables is a Spanish company created in 2007, an independent producer of energy from renewable sources, mainly photovoltaic and storage, listed on the Spanish stock exchange since 2015. Its business model covers all project phases, from development, through construction and financial structuring to plant operation and maintenance. The company has a global platform of more than 15 GW of solar in various stages of development in the eleven countries where it operates in the European (Spain, Italy, Germany, Poland and the United Kingdom), North American (United States) and Latin American (Chile, Peru, Mexico and Colombia) markets.
